Assignment 2 Demo Sessions

You must attend 1 of 4 assignment demo sessions.

- Tuesday Nov 7 16:30-19:00
- Friday Nov 10 09:30-12:00
- Thursday Nov 14 17:30-20:00
- Friday Nov 16 1 17:30-20:00

Demo sessions start in a lecture theatre (location TBA) for
introduction. then we move J17 third floor labs
They will be email asking you to indicate which session you will
attend so we know roughly how many attending.
Not compulsory to attend that session.

Assignment 2 Demo Setup

When you submit your assignment with give (from Tuesday on)
you will be given a link to check that your assignment works in the
demo setup.
Give early, and check carefully.

Assignment 2 Assessment

Groups of 6 formed.
You assess 5 other students' assignments.
You demo to the other 5 students.
You must enter assessment of 5 other students assignments.
 30 grades for various attributes to be entered via online form.
Mark will be obtained from median of grades for each question.
1-2 unfair assessors won't change your mark.
Appeal possible to Andrew who will attend all sessions.

Course Aims

This course aims to explore a range techniques, language and tools for the development of software systems.
Hopefully you now:

- understand a wider range of programming languages, tools and techniques
- understand more about how/when to apply these languages, tools and techniques

You've been given only an introduction to these topics but you should be better equipped to:

- given a problem and choose language/tools
- construct a complete software system to meet the problem
- determine how correct/reliable/efficient the system is
- improve correctness/reliability/efficiency of the system

Syllabus/Topics

- Perl
- Regular expressions
- Shell
- Unix filters
- Generating web content with Perl (CGI)
- Intro Python (for Perl programmers)
- Language choice/comparison - cost, performance, security ..
- Performance tuning
- Version control, configuration (`make`)

All topics are potentially examinable but few exam questions on last 3.

Assessment

Assessment summary from the introductory lecture:

```
ass    = mark for assignments    (out of 30)
labs   = mark for labs           (out of  9)
test   = mark for weekly tests   (out of  6)
exam   = mark for exam           (out of 55)
mark   = ass + labs + exam

okExam = two part 3 questions solved

grade    = HD|DN|CR|PS  if mark >= 50 and okExam
         = FL           if mark < 50
         = UF           if mark >= 50 and not okExam
```

Note: labs + test + ass1 marks will be available before the
Final Exam.
Check via /home/cs2041/bin/classrun -sturec

Lab & Test Marking

Lab marks from weeks 2..11,13 summed and capped at 9.
Tests were weeks 5..12.
Best 6 of 8 test marks summed to give mark out of 6.
I'll scale either up if its distribution looks low.

Exam

Internal exam run in CSE labs.

The exam will run in two sessions Tuesday 07/11

Sessions are 9:15-12:30 & 12:20-16:10

Students with clashes automatically scheduled to non-clashing session.

Other students can optionally indicate preference for morning/afternoon at URL email to you at end week 13.

Seating details will appear on class web page 48+ hours prior to actual exam.

Closed book exam - no materials allowed.

Online language cheatsheets & documentation see:

http://www.cse.unsw.edu.au/ cs2041/exam/

No past exams available,

some past questions released in stuvac.

Some weekly test questions are past exam questions.

Attendance slip will be A4 and most of it available for rough work.

Exam has 3 parts - do all of them!

Exam Part 1

Must be completed during 1st 30 minutes of 3 hour exam.
No use of computer allowed during this part except to enter
answers into application and view online documentation,
You can not run Perl or Python or shell or ....

- Probably about 7 questions
- Emphasis on reading Shell/Regular expressions/Perl/Python
- Some questions will ask you to read code and indicate what it
  does.
- Questions will mostly be short answer

Exact format (skeleton exam) released 24 hours prior to actual
exam.

Exam Part 2

- Probably about 7 questions
- Some questions on Shell/Regular expressions/Perl/Python
- Some questions might ask you to write code
- Maybe questions on other lecture topics (CGI, git)

You get the part 2 questions at the start of the 3 hours but some questions may require typing answers into separate file which you won't be able to do until the first 30 minutes is up.

Exact format (skeleton exam) released 48 hours prior to actual exam.

Exam Part 3

Probably 6 questions

You get the part 3 questions at the start of the 3 hours but you can not run Perl/Python/... or type them in until the first 30 minutes is up.

Almost all students spend the 30 minutes working on the written questions.

You must perform satisfactorily on the exam to pass the course. This is defined as solving at least two of the part 3 questions completely.

Exact format (skeleton exam) released by noon day before exam

Part 3 - Question

- Questions will describe a task and ask you to write a program that performs this task.
- Questions will usually include examples.
- A question may give you some code to start with - most/all will not.
- No CGI in part 3.
- You may or may not be given test data or other files
- 1 or more tests may be done on submission. This does not guarantee any marks. Do your own testing.
- There may be no submission tests for some questions.
- It is not sufficient to match any supplied examples.
- You may use Shell, Perl or Python to answer any question.

Part 3 - Marking

- Your answers will be run through automatic marking software.
- Please follow the input/output format shown exactly.
- Please make your program behave exactly as specified.
- All answers are also hand marked. The automatic marking is to assist these markers.
- No marks awarded for style or comments.
- Use decent formatting so the marker (and you) can read the program.
- Comments only necessary if you want to tell the marker something.
- Minor errors will result in only a small penalty.
- E.g. an answer correct except for a missing semi-colon would receive almost full marks.
- No marks will given unless an answer contains a substantial part of a solution (¿ 33%).
- No marks just for starting a question and writing some code

Special Consideration

By attending the exam, you are saying "I am well enough to sit it".
If you really are sick, stay home and apply for Special
Consideration.
Applications for Special Consideration from people who sat the
exam will be ignored.
If you become ill during the exam, ask the supervisor to contact
me and then talk to me.

Provisional Results

Provisional results will be made available via classrun when marking is complete.

I'll send email announcing this.

Marking usually takes 7-10 days (more if you bug me).

Provisional marks will be emailed to you by Friday 24

You will be emailed time(s) which you can view your exam and check marking.

Final results will appear on uni web pages (myunsw).

Supplementary Assessment

Most people offered supplementary exams because they miss original exam due to illness.

Examiners meeting may also offer students with borderline results & good transcripts supplementary assessment.

I'll offer supplementary assessment to students with borderline results.

See course outline for details.

Please don't plead to be treated specially - I am careful to treat all students equally.

Students who sat the final exam can not increase their mark beyond 50 in the supp.

Students who have passed the subject are not normally offered supplementary assessment.

So if you get a PS but you expected a DN you won't get a supp normally.

Supplementary Exam

Similar format to final exam (no skeleton released).

Supplementary exam likely to be on-or-about Dec 6.

There is no alternative to the supplementary exam - if you miss it your grade will be FL.

If you think you might be offered supplementary assessment make sure you are available that week.

Supplementary assessment offers will be sent by email.

- Lecture time not used efficiently.
- Late starting with gitlab, git support could have been better
- A lot to learn: regex/sh/Python/Perl/CGI/...
- Not enough time to cover (so) many things
- Labs a lot of work

- Labs & tutes (do you agree??)
- Weekly Tests (do you agree??)
- Tutors
- Piazza
- Students

And that's all ...

Good Luck
I hope what you've learnt in this course will be useful.
I hope you get the mark you deserve.
